# Kubernetes Dashboard Error

When, we were trying to access Kubernetes web Dashboard for Kubernetes clusters for Azure Kubernetes Service (AKS) using the following command: -

```
az aks browse --resource-group AKSRG --name akssaurav
```

Then, we faced Kubernetes Dashboard Error: -

This error was coming because the "System Service Account" has not enough permission. So, we need to add permission with the following commands: -

```
kubectl create clusterrolebinding kubernetes-dashboard -n kube-system --clusterrole=cluster-admin --serviceaccount=kube-system:kubernetes-dashboard
```

And If you want to remove the permission, you can use the following command: -

```
kubectl delete clusterrolebinding kubernetes-dashboard -n kube-system
```

Even after we gave the permission, it doesn't work, and we had to remove Kubectl and install all over again: -

```
az aks install-cli
```

You just need to connect to AKS by run get credential using the Resource Group and Azure Kubernetes Service (AKS) with the following commands: -

```
az aks get-credentials --resource-group AKSRG --name akssaurav
```
